CLOSED-LOOP NANO-POSITIONING SYSTEM

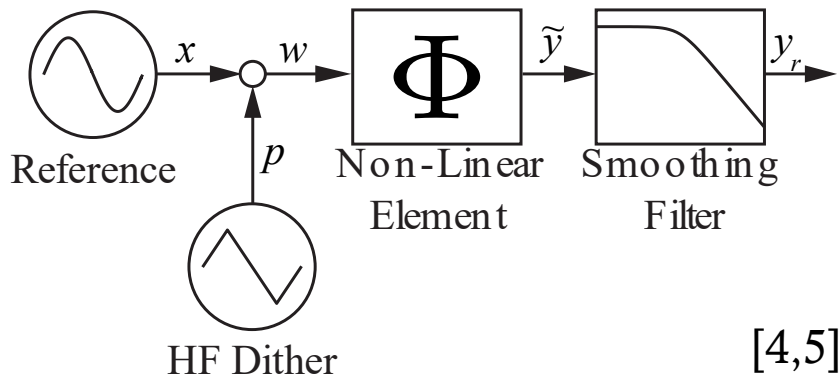

NON-LINEAR DAC MODEL

DAC model accounting for glitched and INL non-linearities for a 16-bit Texas Instruments DAC8544.

WHAT IS DITHERING?

- Dithering: is a process by which a form of noise is intentionally applied to a signal in order to randomize the quantization error (e.g. due to intended resolution reduction) [3].

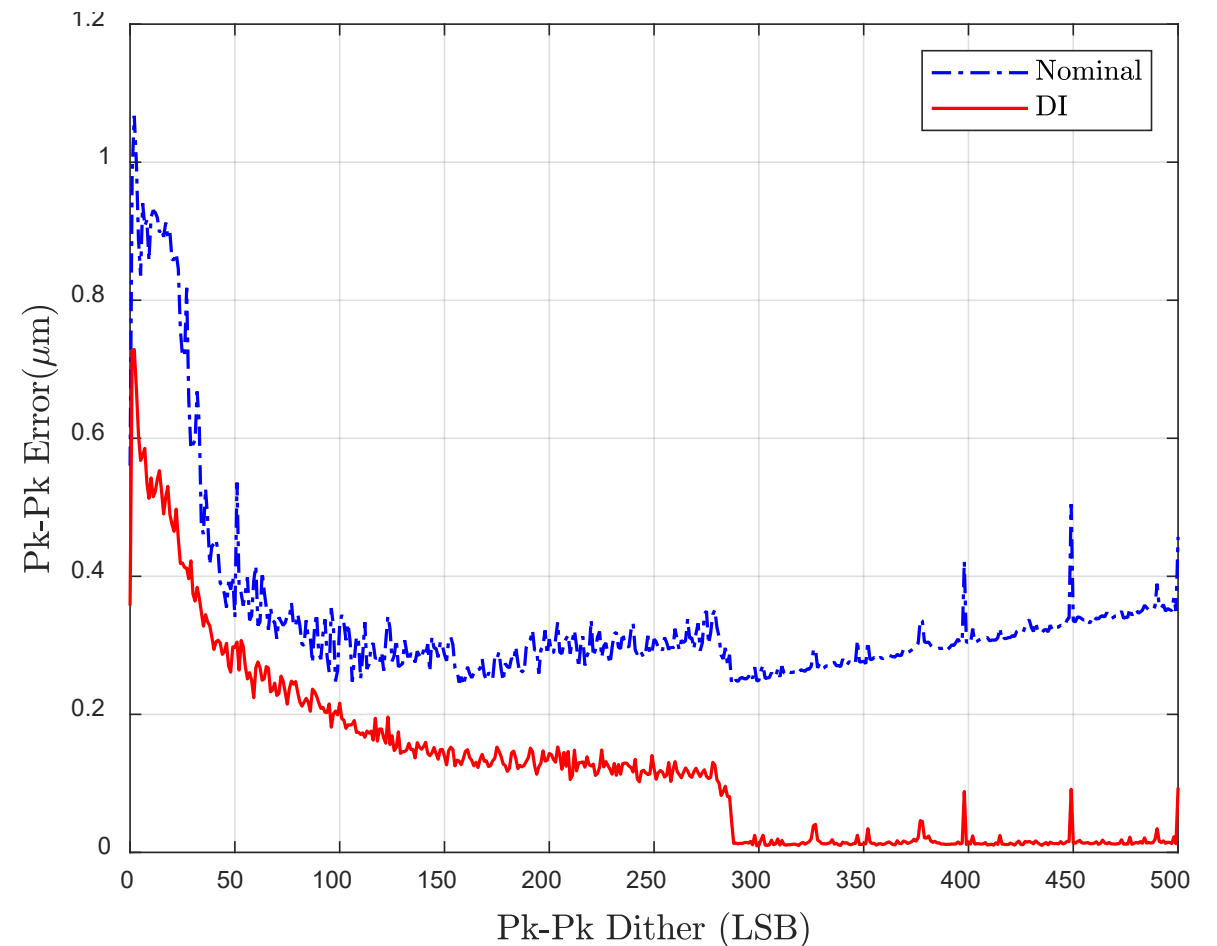

GLITCH DISTURBANCE IN CLOSED-LOOP

Glitch mitigation performance:
